

Mission Statement

At AMP surfactants we are passionate about our organic technology and we will strive to introduce and educate our fellow turf and ornamental professionals about the many features and benefits of colloidal surfactants.

A New Approach to Plant Health

Amn surfactnats 6951-D Vickie Cr

For trees shrubbery, ornamentals, palm trees, cycads, and just about all plants. GenysisMobility® amplifies tank mix solutions and mobilizes the nutritionals into the leaf. The difference is colloidal surfactants move much more of your fertilizer where it needs to go.

Mobilize insecticides and fungicides.

GenysisMobility® will enhance insecticides, fungicides, anti-bacterials, antibiotics making them more efficient and more effective.

We started using GenysisMobility® and TRU-WET® about 3 months ago and our lawns and shrubs have never looked so good.

Lawn Supreme, Rockledge FL

- T.D.S. Total dissolved solids
 - Conductivity
 - More dissolved solids in the water, more conductivity.

Water tension is measured in dynes. GenysisMobility® and TRU-WET® when added to tank water will reduce the dynes by about 50%. When nutritionals and herbicides are added to tank water with very low surface tension the products are able to move into a state of total suspension of equal parts. The conductivity of the spray solution increases. Turf and ornamental products take on more powerful characteristics and work so much better.

TRU WET

For residential lawns, ornamental turf, greens, fairways, tee's.

- High concentrated T.D.S.
- Increased spray conductivity
- Herbicides work better, faster.
- Clean healthy roots resist drought, traffic and fungus.
